

Dev / design notes / bug reports for the project

Developing an Audio Mixer of K-pop

1. It created an Index.html file that has a tape audio player and 10 tapes. : completed
2. The tapes include Korean music. : completed
3. The user can click, drag and drop one tape into the tape area: completed
4. During the tape is in the tape area on the audio player, it can play music : breaking
5. The user can stop, pause, and play when the button click: completed
6. If the user wants to change another music, another tape should drag and drop into the tape area on the audio player : breaking

Breaking.

1. During the tape is in the tape area on the audio player, it can play music.
Currently, the music is played by simply clicking on the tape. However, it should be modified so that the tape is only played when it is in the drop zone.
2. If the user wants to change another music, another tape should drag and drop into the tape area on the audio player.
Currently, an old tape don't removed when the another tape drop on the drop zone. However, when you drop another tape on the drag zone, the old tape should be removed.
